

* in-panel HPV+ reference marker; ID1 and KRT16 (markers) and SPRR3 (keratinization family) also hit in the top-10

† keratinization-family gene

top-100 enrichment: hypergeometric p = 0.0014; permutation p = 0.0015 (null expectation: 0.23 hits per 100 genes)

strongest at the maximal-dose recovery point (λ = 5: six markers, incl. CDKN2A)
